

# Agile Testing Alliance Global Gathering 2014

November 7th 2014, Bangalore

"Experience Agility"

Agile Testing Alliance Global Gathering (ATAGG) is a first of it's kind annual conference specifically focused on "practical agile & agile testing"!!

## Call For Proposal - ATAGG 2014

---

Agile Testing Alliance (ATA) wants to invite industry practitioners to conduct and facilitate practical agile testing dojos / workshops / sessions at AgileTestingAlliance's Global Gathering (ATAGG) 2014.

A dojo (道場 dōjō?) is a Japanese term, which literally means "place of the way". Initially, dōjōs were adjunct to temples. The term can refer to a formal training place.

We invite industry experts and real agile practitioners to share their experience and expertise on practical agile & agile testing methods, techniques, processes, mindset, tools, physiology, science and art through a hands-on interactive session (coding, testing, games, exercises & case studies) of either 1 or 2 hours.

Hence we are calling you practitioner and not speakers.

We welcome practitioners with a new concept, process & methodology as long as it is being taught or explained with a practical scenario, exercise, game or case study. For example:

1. Scrum taught using Lego
2. Lean and Kanban using paper plane game
3. User story writing, splitting & estimation using live user stories and affinity / poker cards
4. Release planning using a case study or tools like PivotalTracker, VersionOne, Rally etc...
5. Test strategies using live exercises and scenarios
6. Test design techniques using real life scenarios and case studies
7. Test automation using tools & frameworks like Selenium, Cucumber, xUnit, Jenkins, Capybara etc...
8. Mobile test automation tools & frameworks like Robotium, Frank, GUITAR etc...

Your dojo / workshop / session stands a good chance of selection if:

- It is unique and compelling
- Your proposal clearly states the learning objectives
- It is delivered in a hands-on practical fashion
- It is relevant to the overall conference theme
- You have stated in details of how you are going to run it

Your tool (commercial or open-source) might have solved a hard problem that the entire community is facing. We would love to hear about the problem and your technical solution. We strongly discourage tool authors from hijacking the conference to pitch their company, services or products.

Agile and agile testing industry has matured and moved beyond basics. Hence we strongly discourage practitioner to pick up basic topics. Industry is ready for more advanced and practical topics than just theory.
